

Audit Worksheet for Consistency with ACOG Guidelines for Diagnosis of Labor Dystocia or Failed Induction

Name of Auditor:			Au	Audit completed on (date)			
Directions: Review 20 Nulliparous Term Singleton Vertex Cesarean cases to determine correct use of dystocia diagnosis. Place √ if criteria met in each category.							
1				2		3	
For diagnosis of Dystocia/Arrest Disorder (all three should be present)				For diagnosis of Failed Induction before 6 cm dilation (both should be present)		For Dx of failed	
Identifier (MRN, Other)	Cervix ≥ 6cm	Membranes ruptured, then	No change x 4 hrs with adequate uterine activity (or 6 hrs on oxytocin w/inadequate uterine activity)	Bishop score ≥ 8 before elective induction	Oxytocin used for a minimum of 12 hours after ROM	induction after 6 cm dilation (see criteria 1)	

To calculate "percent consistency with ACOG guidelines for diagnosis of labor dystocia or failed induction"-- divide the number of cases that were 100% consistent with guidelines (meaning the cases that checked all boxes) by the number of cases reviewed.
