Definitions:

PMH Definition: For the purposes of this data form, perinatal mental health conditions refer to mood, anxiety, and anxiety-related disorders that occur during pregnancy or within one year of delivery and are inclusive of mental health conditions with onset that predates pregnancy. These conditions include and are not limited to depression, anxiety and other mood disorders such as posttraumatic stress disorder and obsessive-compulsive disorder, bipolar disorder, and postpartum psychosis.

PMH Screening Workflow (10 chart audit):

Random sample of 10 charts to audit per month from ALL delivered patients in that month

Divide the total number of delivered patients typically occurring at your facility in a given month by 10. Select every nth chart of delivered patient where 'n' is the result of that division to identify 10 charts to audit per month

Complete brief chart review on 10 randomly sampled charts to answer the questions below

Instructions for filling out the matrix:

1. Indicate how many patient charts you reviewed by checking off each patient chart reviewed in the first row.

- For example, if you reviewed 7 patient charts, you will check off the first 7 patients in the row titled "Patient chart reviewed".

2. Complete a chart review for each patient by selecting the correct option for each prompt in the column. If the prompt doesn't apply to that patient, you may leave it unchecked.
